

The latest diamond pad innovation for surface polishing and fine grinding of finished surfaces

Revolutionary dynamic bond

- » Tools do not need to wear to engage the diamonds, as they are bonded firmly to a flexible surface
→ **designed for stability**
- » Revolutionary bonding ensures dynamic 3D freedom of movement of the diamonds
- » This flexibility allows the diamonds to be pressed against the floor
→ **numerous diamonds are engaged**
→ **work is realised quicker**
- » The flexibility allows the diamonds to be adapted on uneven/soiled surfaces
→ **no scratches in the floor surface**
→ **low heat development, making it ideally suitable for dry use**

Special characteristics

Low heat development
Very long service life
For dry use
High adaptability of diamond pads to uneven surfaces
No scratches in floor
Very fine gradations

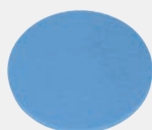

Applications

Exposed screed, filler, smoothed concrete, cement-bound flooring, artificial stone, design floors, terrazzo

FURBY PADS

 Furby Pad (Ref. No.: 722190) Ø 125 mm, blue, very fine gradation																				
 Furby Pad (Ref. No.: 722191) Ø 125 mm, pink, fine / medium gradation																				
 Furby Pad (Ref. No.: 722192) Ø 125 mm, brown, medium / coarse gradation																				

 recommended

Furby Pad Blue

The blue Furby pad is ideal for polishing and is used for the final phase. An extremely fine surface from slightly matt to slightly glossy is achieved with the pad. Very little material is removed.

Furby Pad Pink

The pink Furby pad is ideal for polishing and is used for the final phase. A fine surface from slightly matt to slightly glossy is achieved with the pad. Little material is removed.

Furby Pad Brown

The brown Furby pad is ideal for polishing and is used for the final phase. A matt surface is achieved with the pad. Little/average material is removed.
