

Premium quality for maintenance cleaning – Free of chemicals and cleaning agent

The melamine pad is a top-quality product made of superior melamine rebonded white and grey foam. This creates a profile structure that ensures deep cleaning and dirt sucking effect.

Suitable for basic and maintenance cleaning of large areas. The Supreme melamine pad is only used for cleaning with water. Chemicals or cleaning agents are not required, but can be added.

It can be used on rubber, concrete and safety (non-slip) floors, smooth tiles and linoleum flooring.

Best results are achieved with the Supreme melamine pad when cleaning hard floors, and on non-slip and Colorex PVC flooring.

Properties

- » Highly efficient when compared to non-structured melamine pads. Single disc cleaning machines achieve up to 1,000 m², depending on the floor structure/handling by the user
- » Open structure for absorbing dirt
- » Ideally suitable for modern microporous surfaces. Thanks to its structure, the pad penetrates into the pores of the surface, cleaning these very effectively.
- » Also cleans effectively when only used with water (without cleaning additives).
- » Cleaning of the melamine pad between periods of use is unnecessary.
